#### *About me*

*Hi, my name is Justin. I am 38 years old, from Brisbane, born and bred from Irish and English descent.*

*Growing up I guess you would have defined me as an athlete. At the age of 16 I was a nationally ranked Tennis player, state shot put champion and finalist in 100m, 200m sprints, 110m hurdles, long jump, discus and javelin. That year I was presented with one of the first in Australia, Pierre de Coubertin awards, for my accomplishments by the Olympic committee. The next year a growth in my leg was diagnosed as lymphoma, which it was surgically removed and was treated with a couple of rounds of chemotherapy.*

*When I finished high school, I started working for the family business developing and manufacturing natural and organic fertilizers for use in agriculture and horticulture. Although I have no formal education, I have spent my entire career studying agronomy, biology and chemistry and applying them to my field.*

#### *Interest in IT*

*My interest in IT are also my hobbies! For years I have been building little circuit boards and tinkering with Arduino and Raspberry PI projects and would love to make a career of it! My aspirations (for now) are not to create a big money maker or the genius invention that impacts millions around the world. I want to become an expert in programming and work on things like digital speedometer displays for cars with customisable interfaces and automotive automation.*

*I started this course with RMIT as a pathway towards further study in It and electronics engineering.*

*My project is a motion gesture and voice command HUD module for a car.*
